BUILT WITH PASSION:

If there's one thing Trisled is passionate about its speed! Each Avatar SuperVelo is individually manufactured at our factory by our very own speed freaks and features a lightweight and strong vacuum-infused kevlar/composite body.

IMPORTANT INFORMATION:

Avatar is designed specifically for road use and is not compliant with Australian HPV racing regulations.

Does going as fast as humanly possible on an open road get you excited? Then how could you go past the Avatar SuperVelo!

With its small frontal area and completely enclosed wheels and rider, this velomobile is built for high performance and speed.

Building on fifteen years of human powered research and development, our integrated design process and vacuum-infused Kevlar fairing gives Avatar an extraordinary weight of just 25 kilograms.

Yes, you heard us right. In just 2 years since we first launched this model, Avatar has lost a massive 3 kilograms!
