MaxiBike is the perfect load-carrying vehicle for inner-city dwellers and businesses.

Based on a popular European design, MaxiBike has been 'built for Australian conditions'.

It maintains excellent stability with heavy cargo by carrying the load directly above the front wheel.

However, MaxiBike's biggest advantage is its simplicity. Forget trailers and panniers... just throw everything in a tub mounted to the front load rack and you're off!

It's not hard to imagine MaxiBike's practical possibilities. It can carry just about anything you can think of: food, plants, shopping bags, boxes, documents, and for the quintessential Australia, it will even carry a slab!

### BUILT WITH PASSION:

MaxiBike is built at our factory on the Mornington Peninsula and is fully customizable to suit courier fleet requirements. You can rest easy knowing that this high-quality Australian-made product won't let you or your clients down.
